SUMMARY

Full Stack Developer specializing in secure, production-grade Java/Spring Boot systems on AWS. Designs and ships multi-service architectures — containerized, load-balanced, CI/CD-deployed, and monitored — taking a service from local development through to a resilient, internet-facing production deployment.

EXPERIENCE

Full Stack Developer, HCL Technologies

Sep 2025 - Present

Hyderabad, India

- Developed and maintained scalable software applications for various platforms.
- Resolved customer issues by establishing workarounds and solutions to debug and create defect fixes.
- Implemented role-based authentication and authorization with Spring Security to secure application endpoints.
- Designed and configured alerting mechanisms for queue performance and memory consumption, reducing downtime and improving application reliability.
- Designed and implemented an API Gateway integrated with Amazon Kinesis Data Firehose using AWS Lambda for real-time data processing, connected Firehose to New Relic for external monitoring, and configured error log routing to Amazon S3 for reliable storage and analysis.

SKILLS

Languages: Java, JavaScript, Python, SQL

Backend: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, REST API Design, Microservices Architecture

Frontend: React.js, HTML, CSS, Bootstrap

Databases: PostgreSQL, MySQL, AWS RDS, DynamoDB, Flyway (schema migrations)

Cloud (AWS): EC2, VPC, S3, IAM, CloudWatch, Docker, ECR, ECS, Application Load Balancer, GitHub Actions CI/CD, RDS, Secrets Manager, Lambda, API Gateway, Cognito, CloudFront, SES

DevOps & Tools: Git/GitHub, GitHub Actions, Docker, Linux/Ubuntu, Maven, Swagger/OpenAPI, systemd, VS Code, Spring Tool Suite

PROJECTS

Auth & Content Catalog Platform

Java, Spring Boot, Docker, AWS ECS, GitHub Actions, RDS, CloudWatch, Secrets Manager

- Designed and deployed a two-service system (JWT-based Auth Service + Content Catalog Service) with inter-service JWT validation, demonstrating a real microservice trust boundary.
- Containerized both services with Docker and deployed to AWS ECS behind an Application Load Balancer for scalable, restart-resilient hosting.
- Built a GitHub Actions CI/CD pipeline that builds, tests, and deploys automatically on every push.
- Migrated to AWS RDS for the persistence layer and centralized all credentials in AWS Secrets Manager, eliminating plaintext secrets from both codebase and deployment config.
- Instrumented both services with CloudWatch for logging and monitoring across the service boundary.

Auth Microservice

Java, Spring Boot, Spring Security, JWT, PostgreSQL, Flyway, AWS EC2

- Built a standalone JWT-based authentication service with Spring Security and role-based access control (USER/ADMIN), with unit/integration tests and Swagger-documented REST endpoints.
- Deployed to a live AWS EC2 instance with systemd-managed process supervision and environment-variable-based secrets handling for crash- and reboot-resilient uptime.

E-Commerce Web Application

Java, Spring Boot, Spring Security, React, Bootstrap, MySQL

- Built a full-stack e-commerce platform covering product listings, authentication, cart operations, and order processing, with RESTful APIs and a responsive React + Bootstrap frontend.

EDUCATION

B.E., Computer Science & Engineering (AI & ML), St. Martin's Engineering College

2021 - 2025

Hyderabad, Telangana | GPA: 8.22 / 10

CERTIFICATIONS

- Python Full Stack Development - SSSIT (Python, HTML, CSS, JavaScript)
- Machine Learning Certification - Udemy (supervised & unsupervised learning, model evaluation, optimization)
